

### **SPECIAL EDUCATION SERVICES**

Special Education is a delivery system for educational services to handicapped students. It is a comprehensive program that permits students to receive an individualized educational program designed to meet their unique needs through additional personnel, materials and consultant services.

Students may enter into one of the special programs after test results have identified the need. Parental consent is obtained before the evaluation and before placement into the program.

Teachers and parents should make student referrals to the principal, who in turn will contact Special Education personnel.
